

APPEAL
FOR THE REDUCTION OF 80% OF GAS EMISSIONS

and

APPEAL
TO SUPPORT
THE IAES PROJECT "INTERNATIONAL ENVIRONMENTAL CRIMINAL COURT"

Climate change constitutes a direct threat for the survival of hundreds of millions of people. Therefore, the constant increase of greenhouse gas emissions represents a weapon of mass destruction most of all directed towards the poorest populations, which don't have the technical and economical tools to carry out the policies necessary for the adaptation to the new climate.

WE ASK

for respecting the indications forwarded by the scientific community, that is a short cut of the 80% of the greenhouse gas emissions. We ask for the relaunching of low environmental impact technologies and of renewable resources

WE ASK

for an effective safeguarding of the planet Earth and we ask that the International Community here gathered supports the project of *International Academy of Environmental Sciences (I.A.E.S.)* for the establishment of an International Environmental Criminal Court.

Is as matter of fact the respect for the Environment and the Human Rights

WE ASK FOR A SAFER PLANET
